Beetles® +
GEL POLISH

*Please separate caps from bottles before recycling.

How to recycle nail empties with TerraCycle and Beetles

For gel nail polish

- ① Use as much product as possible before recycling.
- ② If there is remaining gel, pour the residue into a shallow disposable container in a well-ventilated area, and let both the bottle and gel residue cure under sunlight or a UV/LED lamp.
- ③ Once fully cured, keep the glass bottle and plastic cap separate and send them for recycling. The gel can be discarded as regular household waste.

For air-dry nail polish

- ① Use as much product as possible before recycling.
- ② If there is remaining nail polish, pour the residue into a shallow, open, disposable container in a well-ventilated area and let both the bottle and residue air dry completely.
- ③ Once dry, keep the glass bottle and plastic cap separate and send them in for recycling. The dry residue can be discarded as regular household waste.

IMPORTANT

Please do not pour liquid nail polish directly into the trash or sink to avoid environmental pollution. Cured gel and dry nail polish can be discarded as regular household waste.
